LO: To solve division problems by thinking of division in different ways.

Sahila's birthday

It's Sahila's birthday and she is having a party.

You could answer these questions using:
words, pictures, numbers, objects, other ways...

- Sahila has 24 cupcakes for the party tea and she would like to share them out equally onto plates. She can use any number of plates. How many ways can she share them equally on to plates?

- There are 21 children at her party. They are going to play a game in threes. Each three will need a balloon. How many balloons will they need?
- Oh no! One of the balloons has popped. What can they do? How many suggestions can you think of?

- Sahila is going to give everyone 3 juggling balls to take home after the party. She has 7 bags of 10 balls. Will she have enough? Will she have any left over?
