1 mark

5. Draw lines to match the climate with the place on the globe.

winter and summer

Equator

spring, summer, autumn, winter

North Pole

wet season, dry season

South pole

winter and summer

Between the equator and the poles

1 mark

6. Put one tick in each row of the table to show whether the fact is true or false.

	True	False
Antarctica is not separated into countries because it is very small.		
The Arctic is not a continent because there is no land under the ice.		
You know when you are close to the Equator because you can see it.		
The South Pole is so cold because it is a long way from the equator
