## LO: To publish an information text

Now that you have worked so hard writing and improving your information text, it is time to publish it.

**Publish - prepare and issue (a book, journal, piece of work) for public sale, distribution, or readership.**

Early
Life

He wanted to be able to swim like a fish
under the water so he did lots of experiments to try
and find a way to breath under the water. He
invented the "aqua-lung" which let people breath
underwater and dive down for long periods. He
also invented an underwater camera that he used
to film in Oceans and seas.

Filming
underwater
and fame

# THE TOCO TOUCAN

The bright orange beak is approximately 19cm long, which is 1/3 of their total body length and is a cone-like shape which curles downwards. This can come in black, blue, green, red, white, yellow or a combination.

Despite the fact that they spend a lot of time in trees, they are not very good at flying so they move from tree to tree by hopping.

The majestic bird has 2 eyes on either side of their forehead next to their beak so that they can look out for predators and prey. These are 4cm in diameter.

**DIET:**
Toucans are known to catch insects, tree frogs, lizards, fish or even eggs!

As well as having a bright beak, toucans also have a fluffy white patch on their neck below their beak. It's about 8-10cm in length and has a variety of colours: (mostly) white, yellow and orange. This however does not come in more than one colour per toucan.

Toco Toucans are measured 60-65cm in length; they are the largest of all 40 types of toucan. They live in South America and Africa and Asia.

**HUNTING:**
Toucans live in small flocks of about 6 birds and hunt together in groups.

Mostly to balance them, toucans have strong legs and toes; of the 4 toes on each foot, the first and the fourth are backwards, so that 2 toes wrap around the branches of a tree from both directions.
